### **DETAILED ACTION**

# Response to Amendment

1. The amendment filed 11/7/06 has been entered.

### Response to Arguments

2. Applicant's arguments with respect to claims 1-8 and 10-24 have been considered but are most in view of the new ground(s) of rejection.

Please note that the grounds of rejection over Deguchi (US 6,452,721) has changed. The primary figure is now figure 12 and the pump has changed from #12 to #42.

### Claim Rejections - 35 USC § 102

- 3. The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.
- 4. Claim 1-4 and 16-19 are rejected under 35 U.S.C. 102(b) as being anticipated by Deguchi (US 6,452,721 published Sep. 17, 2002).

With regard to claim 1, Deguchi discloses an optical transmission system (fig. 12, col. 5, line 65) comprising:

at least a first and a second terminal station, optically connected with each other by an optical link (<u>transmission systems inherently have transmitters</u>

and receivers, which the Examiner considers to be the 1<sup>st</sup> and 2<sup>nd</sup> terminal stations);

Application/Control Number: 10/500,019

Art Unit: 3663

said first or said second terminal station being configured to send on said optical link at least a first optical signal having a first direction (col. 6, lines 21-22) said system further comprising:

Page 3

- a first supervisory unit (<u>col. 6, line 32 from an upstream repeater</u>)
   associated to a device disposed along said optical link;
- said first supervisory unit being configured for generating a first supervisory signal (col. 6, line 32; from the upstream repeater);
- o said first supervisory unit being further associated to at least one modulator that is configured to superimpose on said first optical signal said first supervisory signal (col. 6, lines 32-38; from the upstream repeater);
- o and at least one pump source (#42) disposed along said optical link;
- o said pump source being configured to send on said optical link a pump radiation in a second direction opposite to said first direction (pump #42 is a counter-propagating pump)
- o and configured to cause Raman amplification of said first optical signal and of said first supervisory signal superimposed on said first optical signal (col. 6, lines 60-61).

With regard to claim 2, the supervisory signal operates the switch (#24; col. 6, line 41).

With regard to claim 3, the device is a repeater (col. 5, line 65) with at least one pump source (#12).

With regard to claim 4, the supervisory unit is associated with a pump source (col. 6, line 35).

With regard to claim 16, a photodetector is adapted to receive at least a portion of the 1<sup>st</sup> optical signal and transform it into an electrical signal (col. 6, line 24).

With regard to claim 17, the switches discriminate between the 1<sup>st</sup> and 2<sup>nd</sup> supervisory signals (col. 6, lines 20-26).

With regard to claim 18, the 2<sup>nd</sup> discriminated supervisory signal is fed to at least one modulator (<u>col. 6</u>, <u>line 24</u>).

With regard to claim 19, the 1<sup>st</sup> fiber is <u>#8</u> and the 2<sup>nd</sup> fiber is the fiber between #12 and #10.

# Claim Rejections - 35 USC § 103

5. Claims 8, 20, and 23 are rejected under 35 U.S.C. 103(a) as being unpatentable over Deguchi (US 6,452,721 published Sep. 17, 2002) in view of Sekiya (US 6,839,162 filed Sep. 10, 2001).

With regard to claim 8, Deguchi does not specifically disclose that the modulator is a variable optical attenuator. However, Sekiya teaches supervisory signal modulation via a variable optical attenuator (<u>fig. 6</u>, #109; col. 28, lines 54-28). It would have been obvious to one of ordinary skill in the art (e.g. an optical engineer) at the time the invention was made to use a variable optical attenuator for signal modulation in the

device of Deguchi for the advantage of obtaining a predetermined output power, as is specifically taught by Sekiya (col. 29, line 14).

With regard to claim 20, Deguchi does not specifically disclose a second copropagating pump source. However, Sekiya teaches a second co-propagating pump source (fig. 6, #123). It would have been obvious to one of ordinary skill in the art (e.g. an optical engineer) at the time the invention was made to use a second co-propagating pump source in the device of Deguchi for the advantage of obtaining a designated gain, as is specifically taught by Sekiya (col. 18, line 22).

With regard to claim 23, Deguchi does not specifically disclose a second photodetector. However, Sekiya teaches a second photodetector (<u>fig. 6, #124</u>). It would have been obvious to one of ordinary skill in the art (e.g. an optical engineer) at the time the invention was made to use a second photodetector for the advantage of automatic gain control (AGC) as is specifically taught by Sekiya (<u>col. 16, lines 60-65</u>).

#### Allowable Subject Matter

- 6. Claims 9, 21-22, and 25-34 are allowed.
- 7. Claim 24 is objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

With regard to claim 24, the prior art does not teach or make obvious a second photodetector and is CONFIGURED TO discriminate a fourth supervisory signal carried by a second optical signal. in conjunction with the other limitations of the claim.

# Double Patenting

Page 6

7. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. A nonstatutory obviousness-type double patenting rejection is appropriate where the conflicting claims are not identical, but at least one examined application claim is not patentably distinct from the reference claim(s) because the examined application claim is either anticipated by, or would have been obvious over, the reference claim(s). See, e.g., In re Berg, 140 F.3d 1428, 46 USPQ2d 1226 (Fed. Cir. 1998); In re Goodman, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); In re Longi, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); In re Van Ornum, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); In re Vogel, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and In re Thorington, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) or 1.321(d) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent either is shown to be commonly owned with this application, or claims an invention made as a result of activities undertaken within the scope of a joint research agreement.

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

8. Claim 16 is provisionally rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claim 1 of copending Application No. 10/500,036. Although the conflicting claims are not identical, they are not patentably distinct from each other because the at least one device of claim 1 in the conflicting application 10/500,036 is the photodetector of claim 16 in the instant application. Photodetectors are well-known transducers in the art, that is, photodetectors convert optical signals to electrical signals. It would have been obvious to one of ordinary skill in the art (e.g. an optical engineer) at the time the invention was made to use a photodetector to convert optical signals to electrical signals for the advantage of transduction.

Art Unit: 3663

This is a <u>provisional</u> obviousness-type double patenting rejection because the conflicting claims have not in fact been patented.

#### Conclusion

9. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
